

## Corrigé Q1 DS PCSI

Despite climate scientists' pessimism, Christiana Figueres, the architect of the Paris Agreement, refuses inaction and remains resolutely hopeful. 16

She points to the progress already achieved, notably the decline of fossil fuels and the expansion of renewables, now accounting for 30% of global energy generation, driven by the rapid development of solar power. 34

Moreover, she highlights the relentless efforts of individuals, particularly professionals such as engineers, architects, and farmers, who are working to implement more environmentally-friendly systems. 23

While admitting more effort is needed, Figueres is confident that positive adaptation is taking shape. 15
